Project A: [Stock Trading Platform]

01 2025 - 02 2025

Tools: [MERN | Microservices | gRPC | Upstox API]

🔗

* Developed a **real-time stock trading platform** by Integrating **Upstox API** for fetching live market data, executing trades, and managing stock orders seamlessly.

* Implemented **WebSockets** to enable **ultra-low-latency, bidirectional communication**.

* Designed an **efficient stock search system with OpenSearch**, allowing users to quickly find and track stocks.

* Architected a **scalable microservices system**, leveraging **MongoDB** for the watchlist manager and **Prisma with PostgreSQL** for order management.

* **Optimized inter-service communication** by implementing **gRPC**, significantly improving performance over traditional HTTP.

* Ensured high performance and scalability through **load testing with k6**, validating system stability under heavy traffic.

- * Performed **Exploratory Data Analysis (EDA)** and data preprocessing to clean and transform raw data.
- * Implemented and compared multiple classification models, including **Logistic Regression, SVC, Random Forest, CatBoost, K-Nearest Neighbors, XGBoost, and AdaBoost**.
- * **Achieved 83% accuracy** by optimizing features and fine-tuning hyperparameters.
- * Developed end-to-end **ML pipelines** for efficient training evaluation, inference, and ensuring scalability.
- * Built a **Flask-based web application** to serve the model via REST API.
- * Implemented a **CI/CD pipeline using GitHub Actions** for automated testing and deployment.
- * Containerized the application and deployed the application on **AWS Cloud**, enabling real-time inference and accessibility.
